

Mohd Saqlain Kazi

Full Stack Developer | React.js | Next.js | .NET Core | TypeScript | SQL Server

Mumbai, India | +91 7738144523

scanlain23@gmail.com | linkedin.com/in/saqlainkazi | github.com/scanlain | spott-swart.vercel.app

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of end-to-end product experience building scalable, secure, and high-performance web applications across B2B SaaS and enterprise platforms. Specialises in React.js and Next.js frontends paired with .NET Core and C# backends, with strong expertise in SQL Server, Entity Framework Core, RESTful API design, and microservices architecture. Delivered systems that cut backend response times by 40 to 50 percent, reduced order processing time by 40 percent, and improved page load times by 60 percent across multiple production deployments. Owns features end-to-end from requirement analysis and system design through development, testing, deployment, and post-launch support with zero critical post-launch defects across all shipped products. Built and deployed a production AI platform (Spott) integrating Google Gemini API as the sole engineer. Actively uses AI development tools including Claude and Cursor to accelerate shipping velocity and maintain code quality. Experienced in leading code reviews, mentoring junior developers, and collaborating directly with clients and business stakeholders in Agile and Scrum environments.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript ES6+, HTML5, CSS3, Tailwind CSS, shadcn/ui, Responsive & Mobile-First Design, SPA, SSR, SSG

Backend & Architecture: .NET Core, C#, ASP.NET MVC, Node.js, RESTful API Design, Microservices, Web API, Middleware, Dependency Injection, SOLID Principles, Repository Pattern, API Gateway, HLD, LLD, Clean Architecture

Database & ORM: SQL Server, Entity Framework Core, Code First Migrations, LINQ, Stored Procedures, Query Optimisation, Indexing, Database Design, PostgreSQL, MongoDB

AI, Auth & Security: Google Gemini AI API, OpenAI API, LLM Integration, Third-Party API Integration, JWT Authentication, OAuth2, RBAC, OWASP Best Practices, Secrets Management, Input Validation

Tools & Practices: Git, GitHub, VS Code, Visual Studio, Postman, Swagger, Vercel, CI/CD (GitHub Actions), Docker, Agile, Scrum, Code Reviews, Unit Testing, Sprint Planning, Junior Mentoring, Cursor, Claude AI

PROFESSIONAL EXPERIENCE

Full Stack Developer | Infozest Digital Solutions Pvt Ltd

Mumbai, India | January 2025 to Present

- Spearheaded end-to-end development of 2 B2B SaaS products in a lean team of 3, owning the full stack from requirement gathering and system design through deployment, delivering both projects on schedule with zero critical post-launch defects.
- Designed and shipped RESTful APIs and microservices in .NET Core and C# with Entity Framework Core and SQL Server; built responsive React.js and Next.js frontends using component-driven architecture and Tailwind CSS, cutting backend response times by approximately 40 to 50 percent and reducing user-reported UI friction across both products.
- Served as the primary client-facing developer, led requirement analysis sessions, translated business needs into technical specifications, and maintained continuous post-launch support, resulting in high client retention and repeat feature requests.
- Led code reviews, mentored junior developers on React and .NET Core best practices, and integrated AI development tools (Claude, Cursor) into the daily engineering workflow, measurably accelerating shipping velocity and improving code quality.

- Maintained Agile and Scrum cadence with structured Git branching, peer code reviews, and iterative feature delivery aligned with client feedback throughout the engagement.
- Diagnosed and resolved a critical API timeout issue caused by large dataset queries, re-architecting the query execution into optimised, split operations cutting query response time from 100+ seconds (frequent timeouts) to approximately 5 seconds and enabling reliable handling of high-volume data requests.
- Identified and fixed a recurring timeout in the automated database provisioning workflow triggered on new customer/tenant onboarding, optimising the process to reduce provisioning time from 100+ seconds down to approximately 5 seconds eliminating a major friction point in customer onboarding.

Graduate Engineer Trainee | HCL Technologies

Pune, India | September 2022 to January 2024

- Engineered the blog post editor and real-time content feed for an enterprise-scale knowledge platform used by thousands of HCL employees, built with ASP.NET MVC, React.js, and .NET Core as part of a 6-engineer cross-functional team over a 16-month engagement.
- Developed and integrated RESTful APIs in .NET Core and C# to power core platform features including post publishing, feed aggregation, and user interactions, with SQL Server stored procedures and optimised queries ensuring low-latency data retrieval at enterprise user volumes.
- Refactored legacy ASP.NET MVC modules, resolved production issues with documented root cause analysis, and shipped iterative UX improvements that measurably reduced friction in the content creation flow.
- Participated in Agile and Scrum workflows with structured Git branching strategies, sprint planning, daily standups, and retrospectives, maintaining clean and reviewable commits in a shared enterprise codebase with strict code quality standards.

PERSONAL PROJECTS

Spott - AI-Powered Event Discovery Platform | [Live](#) | [GitHub](#)

Next.js 16, React 19, TypeScript, Convex, Clerk, Tailwind CSS, shadcn/ui, Google Gemini AI, Zod, Vercel

- Built a production-deployed AI-powered event discovery platform featuring QR code check-in, real-time seat tracking, and location-based filtering, deployed on Vercel and live for public use.
- Architected a serverless real-time backend using Convex with reactive queries and mutations, eliminating polling and WebSocket boilerplate while providing live data sync across all clients.
- Integrated Google Gemini AI API for intelligent event recommendations and AI-assisted event creation, demonstrating hands-on LLM API integration in a production application with streaming responses and graceful error handling.
- Implemented end-to-end authentication and role-based access control using Clerk, with type-safe form validation via React Hook Form and Zod schema validation.

Weather App - Full-Stack with Secure API Middleware

React.js, TypeScript, .NET Core, C#, Third-Party REST API, HTML5, CSS3

- Built a full-stack weather application with a React.js frontend and a custom .NET Core middleware API layer acting as a secure intermediary handling API authentication, request forwarding, and JSON response formatting.
- Designed a fully responsive mobile-first UI with real-time data fetching, API error handling, and loading state management for a smooth and reliable user experience across all devices.

Movie Discovery Web Application

React.js, TypeScript, Tailwind CSS, .NET Core, C#, External REST API

- Built a full-stack movie discovery platform integrating an external REST API through a custom .NET Core service layer, with dynamic search, server-side pagination, and component-driven React.js architecture styled with Tailwind CSS.

EDUCATION

Bachelor of Engineering - Computer Engineering

University of Mumbai | August 2018 to May 2022 | CGPA: 8.34

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering, Artificial Intelligence, Data Mining

CERTIFICATIONS

- Foundations of UX Design - Google and Coursera
- Full Stack Web Development - Dr. Angela Yu, Udemy

EXTRACURRICULAR ACTIVITIES

- **Technical Head of Software Support, Computer Society of India (CSI)** - Organised coding competitions and technical workshops for 100+ student developers, gaining early experience in technical leadership and knowledge sharing.
- **Volunteer, National Service Scheme (NSS)** - Led community cleanliness drives and coordinated student support programs, demonstrating initiative and commitment to community development.
